

PROBLEM 2

To print primes between a range.

Example :

[1,10]

Prints output of primes between [1,10] both inclusive.

2
3
5
7

Flow of execution:

Inputs:

1 10

Output:

2
3
5
7

Explanation:

- The program must accept the input as mentioned above, it determines the range between which the primes numbers to be printed both inclusive.
- The output must be a prime numbers generated between the input range and printed in sorted order, **only one prime number for a line.**

SAMPLE TEST CASES:

Test case 1:

- **Input:**
1 10

- **Output:**

2
3
5
7

Test case 2:

- **Input**

20 37

- **Output**

23
29
31
37

Note:

Unnecessary print statements and spaces in the stdout make yours test cases failed. So try to avoid them and follow the same format as mentioned.
